## 03b Networks Corporate overview

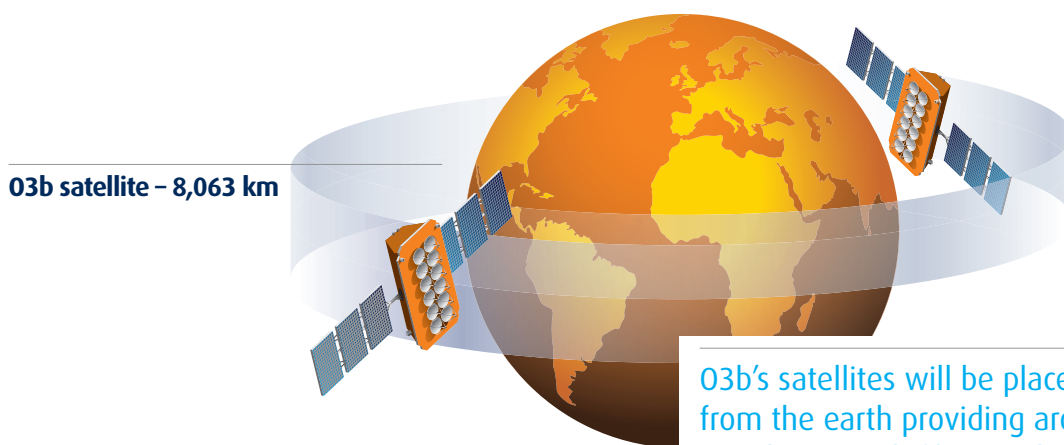

03b will transform communications by deploying a ground breaking, next-generation satellite constellation that will be capable of offering our customers connectivity which is better, faster and more affordable.

This global satellite constellation has the flexibility to meet the capacity and network demands of Satellite Service Providers, Government Entities, Mobile/Wireless Network Operators, Enterprise service providers, Telcos and ISPs in the emerging markets of the world.

03b will deliver the highest combination of bandwidth, speed, low latency, coverage and availability – with a commitment to quality that customers can rely on and at a price accessible to everyone.

03b's next-generation satellite network will reach customers, businesses and other organizations in more than 150 countries across Asia, Africa, Latin America and the Middle East.

At 03b our people are our biggest asset. We have the highest caliber of space and ground engineers, technical and commercial experts and a world class sales team with a passion, dedication and raw determination to make 03b a success and provide the internet to millions of people around the world who currently don't have access.

03b's satellites will be placed in orbit 8,063 kilometers from the earth providing around 70% of the world's population with fiber quality internet connectivity.

# 03b Networks

## Corporate overview

03b's unique network of Medium Earth Orbit (MEO) satellites offer low latency, with round trip data transmission taking around 120 milliseconds. Using our network, our customers can offer a variety of applications to a wide range of business, consumers, government agencies and public organizations.

### IP trunking

03b's IP backbone network includes gateways strategically located in key points of presence (PoP) around the world, allowing customers to build fast, reliable and secure enterprise networks, and satisfy their IP trunking needs. The system allows customers to deploy and connect remote nodes rapidly, and allocate bandwidth as needed from one node to another.

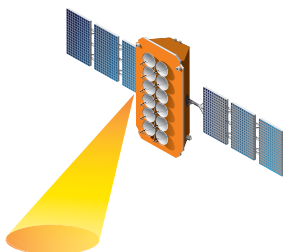

### Mobile/Wireless backhaul

03b provides full country coverage for mobile and wireless backhaul in over 150 countries where wireless access technology is the only option. Furthermore, with link capacities scaling from 1Mbps to 10Gbps, the system offers an unprecedented solution for aggregating and backhauling traffic in both urban and remote areas.

### Fiber resiliency

Operators seeking to strengthen their offer can use 03b's carrier class complement as an 'insurance policy' for peace of mind. In the event of fiber implementation delays or the maintenance of a terrestrial connection, a seamless switch over to an 03b connection could save hours or days of operational problems and restore customer trust.

### On demand capacity

In emergency situations or during military operations, satellite connectivity provides essential links between personnel when terrestrial infrastructure is damaged or doesn't exist. 03b's steerable spot beams can be positioned when and where they are needed at short notice to provide government agencies with the vital communications links they require.
